

# SPECIAL THEMATIC ISSUE ON MICROBE-ASSISTED CROP PRODUCTION

Editors: **Angela Sessitsch, Kornelia Smalla, Linda Johnson,**  
and **Birgit Mitter**

*FEMS Microbiology Ecology* invites submissions to a special issue on Microbe-Assisted Crop Production. The issue will be related to the 'International Symposium on Microbe-Assisted Crop Production – Opportunities, Challenges, and Needs' taking place in Vienna, Austria, November 23- 25, 2015.

For more information visit [www.micrope.org](http://www.micrope.org)

This thematic issue will focus on various microbiological aspects of crop production including the understanding of plant-associated microbiomes, mechanistic understanding of beneficial plant-microbe interactions, multilateral interactions in the plant environment, transfer of applications from lab to field, and application strategies.

All submitted papers should be complete and adequately supported by original experimental work leading to significant advances; they should not be preliminary versions of communications to be published elsewhere. Prospective Authors for MiniReviews/Perspective/Opinion articles should contact Editors in advance. All manuscripts will undergo regular review by members of the Editorial Board and other appropriate experts.
